## Venus Jewel Unveils 16.92-ct Fancy Yellow Diamond at HK Show

Venus Jewel, a natural diamond manufacturer and world leader in solitaires, unveiled Yellow Lava, an extraordinary 16.92-carat vivid yellow and flawless, radiant-cut natural diamond, at the September Hongkong show – the Jewellery and Gem World (JGW) being held from 16th to 20th September 2024.

Natural vivid yellow diamonds are extremely rare, with only one out of approximately 10,000 carats mined being a natural fancy-coloured diamond. Finding a vivid yellow diamond weighing 16.92 carats is even rarer. The intensity of the yellow colour is graded as Fancy Light, Fancy, Fancy Intense, and Fancy Vivid

“We are delighted to present the “Yellow Lava”, a true testament to our craftsmanship, energy and dynamism. An epitome of luxury, this diamond is a symbol of passion, power and elegance. The name Yellow Lava is derived from its evenly distributed Vivid Yellow colour & flawless clarity” says Rajesh Shah, Partner, VenusJewel.

“One of the most coveted diamonds ever released by VenusJewel, the Yellow Lava, continues to redefine our commitment to excellence and artistry. This limited-edition piece is destined to become a treasured family heirloom or an iconic statement of personal luxury,” adds Devansh Shah, Partner, VenusJewel.
